Fire Prevention System

Mapping Tools:

- Zoom in and out
- Zoom window
- Zoom to previous
- Zoom to Scale
- Layers on/off
- Copy to Clipboard
- Bookmark map area
- Select Radius
- Select Polygon
- Create buffer
- Distance Measurement

Fire Prevention System developed by **Ennoble Consultancy** is a powerful, easy-to-use solution for performing on-site auditing and data collection in order to enhance fire prevention. It comprises the use of mobile PC, Bluetooth wireless technology and GPS to achieve accuracy, efficiency and mobility on data collection on the field so that fire hazards can be minimized.

With **EC Fire Prevention System**, field staffs can track their exact location on the field with the GPS device; can use Bluetooth wireless technology to transfer data which will be uploaded and linked to the corresponding property record in the database. Besides, it can automatically generate fire infringement notices which are ready to be sent to the offenders.

To view the application sample, feel free to visit the website:

<http://hume.ennoble.com.au/devcitylaws/HumePropMain.cfm>

Functionality:

- Graphical display of property location, photos and reports
- Automated browser-based infringement printing features
- Production of property history
- Production of charts to show summary of works required for each suburb
- Ability to search properties in various attributes
- Ability to access and analyze data
- Ability to upload photos from camera to tablet PC via Bluetooth
- Ability to export data to Excel files
