Permits Management System developed by Ennoble Consultancy is a powerful, easy-to-use application to enhance asset protection and permits management. For performing on-site auditing and data collection as well as data management and auto infringement notice generation, EC Permits Management System provides an all-in-one solution to asset protection.

Main features:

- Ability to keep track of field staff's location in real-time using GPS (Global Positioning System)
- Graphical display of property location on the map
- Automated browser-based infringement printing features
- Production of property history and reports
- Production of charts to show summary of works required for each suburb
- Ability to search properties in various attributes
- Ability to access and analyze data
- Ability to export data to Excel
