Tower Assets Management System (TAMS) developed by Ennoble Consultancy is a simply rich, innovative, independent and portable GIS application in managing telecommunication towers

Tower Assets Management System Main Features:

Tower Management and Inspection

The form provides the ability to file assessment and reports about each and every single detail of the tower.

List of task that have not been complied

the system also provides the ability to list out all the task that have not been complied and will need to be done as soon as possible.

GPS location tracking

With the attached GPS, you can get the exact location of the tower.

Functionalities:

- Accurate graphical display of map and locations

- Ability to record current longitude and latitude position

- Ability to record physical assets via the polygon drawing tool or multiple GPS coordinates

- Ability to show the asset onto the map immediately after the asset created
